About adapting and modifying programs for students

Who? Students who need changes to regular programming.

What? Adapted Program - when a student shows what they know in a different way; for example, an oral test instead of a written test. These students still cover the same material as everyone else in the classroom.

Modified Program - when different material is provided for students so they can learn at their individual levels.

When? A student can be changed to an adapted or modified program as soon as he/she shows signs of requiring one.

Where? Adapted or modified programs are carried out, for the most part, in a classroom with everyone else (inclusion).

Why? Adapted and modified programs are here to make sure every child has the opportunity to succeed.

About how your child’s teacher knows

This brochure tells you about new and exciting ways teachers measure your child’s learning.

Accurate assessment of students’ work can be done in many ways.

Teachers Do Know How Your Child is Doing. Ask Them!

About tips for success

1. Have a spot where your child can empty his/her backpack and provide a specific spot for parent information. Use your child’s homework log for communication between home and school.

2. Make sure your child has a regular, well lit spot for completing homework with the necessary supplies. The first 30 minutes after school is often the best time.

3. Giving your child regular chores at home helps with his/her success in school.

4. Help your child manage time. Teach him/her to list responsibilities and organize.

5. Teens need 9 hours of sleep per night. Less than 9 hours leads to irritability and difficulty storing information. Younger children need 9 - 12 hours of sleep per night.

6. Breakfast eaters are likely to:
   • achieve higher grades
   • pay closer attention
   • participate more in class discussions
   • manage harder school work

7. Be active: walking oxygenates the brain and improves memory.
   • physical activity helps children sleep well at night and stay alert by day.
   • active play improves school performance, concentration, mood and behaviour.

8. Limit television time and computer time to 1 hour per day. This includes limiting video games.

10. Talk to your child’s teacher.

“Your Child’s Teacher Knows”

Information to help you understand how your child’s teacher knows...
Authentic assessment equals meaningful assessment.

Authentic assessment is when teachers use different ways to measure what your child has learned. Teachers use formal and informal ways to keep track of students' progress. Some of these include:

- **teacher observations** - teachers watch your child learn, play and talk to each other
- **portfolio** - a collection of a child's work
- **reading records** - a reading record tells what a reader says or does while reading - these records allow a teacher to know at what level a child is reading
- **rubrics** - scoring guides
- **group work** - children work as a team to get a job done; everyone plays a part
- **oral presentations** - children speak in front of the class
- **projects** - work that takes more than one class to complete
- **research papers** - written work where your child has to find information from different places
- **book reports** - any assignment that shows a child has read and understood the book
- **resource-based learning** - learning by using many different things
- **students' self-evaluations** - students mark themselves
- **classroom meetings** - conversations about learning and working as a team
- **experiments** - hands-on learning; learning by doing

Teachers put a lot of time and effort into figuring out what type of assessment will be helpful, based on how your child learns, and the subject being taught. All forms of assessment help us know how students are doing.

Learning never stops.
