Final Project Proposal

*If you could design the ultimate final challenge for this course what would it be?*

**Criteria:**

1. Must be an all encompassing challenge that combines as many of the topics as possible that we have covered in the course. such as frame design, driving styles, grippers, gears ect...

2. Must be a plausible challenge, which means that it must be something that we can setup/build within the classroom.

3. Can only use the contents of 1 vex classroom kit. **NO OTHER PARTS NECESSARY**

To get you started some possibilities could include such things as a race, an obstacle course, scavenger hunt or even a combination of ideas. In your proposal please include a description of the challenge, a diagram of the course required for the competition and a method for marking/scoring.

**Description:**
